

QA INTERVIEW ASSIGNMENT REPORT

Project Details

Project Name: Tichi Web Application

Module Tested: Authentication Module

Prepared By: Brindhya Palanisamy

Testing Type: Manual Testing

Date: 02-07-2026

1. Assignment Objective

The objective of this assignment is to perform manual testing on the Authentication Module of the Tichi Web Application.

The assignment focuses on validating:

- Signup Flow
- Login Flow
- Forgot Password Flow
- Reset Password Flow
- Input Validations
- Bug Identification and Reporting

The purpose is to ensure that the application behaves correctly for both valid and invalid inputs and that all validations function as expected.

2. Scope of Testing

The following modules were included in testing:

- Signup Email Validation
- Signup Details Validation
- Login Validation
- Forgot Password Validation
- Reset Password Validation
- Bug Reporting

Fields Covered:

- Email
 - First Name
 - Last Name
 - Phone Number
 - Password
 - Confirm Password
 - Terms & Conditions Checkbox
 - Reset Password
-

3. Testing Approach

Manual testing was performed using multiple testing strategies to validate the application.

Testing methods used:

- Functional Testing
 - Validation Testing
 - Positive Testing
 - Negative Testing
 - Boundary Value Testing
 - UI Validation Testing
-

4. Test Scenarios

Signup Scenarios

- Verify signup with new email
- Verify existing email redirects to login
- Verify email validation
- Verify signup details validation

Login Scenarios

- Verify login with valid credentials
- Verify login with invalid credentials

Forgot Password Scenarios

- Verify forgot password navigation
- Verify reset link sending

Reset Password Scenarios

- Verify reset password validation
 - Verify password mismatch validation
 - Verify successful password reset
-

5. Test Environment

- **Browser:** Google Chrome
 - **Testing Type:** Manual Testing
 - **Internet Connection:** Stable
 - **Platform:** Web Application
-

6. Assumptions

- Testing was performed in a stable internet environment.
 - OTP and password reset links depend on email service availability.
 - Only frontend functional testing was performed.
 - Backend/database validations were not tested.
 - Cross-browser testing was not included.
-

7. Test Case Summary

The test cases were documented in 4 sheets.

Sheet 1 – Signup Email Validation

Total Test Cases: **16**

Sheet 2 – Signup Details Validation

Total Test Cases: **25**

Sheet 3 – Login + Forgot Password + Reset Password Validation

Total Test Cases: **15**

8. Test Execution Summary

Module	Total Passed Failed Partially Correct			
Signup Email Validation	16	14	1	1
Signup Details Validation	25	24	1	0
Login + Forgot Password + Reset Password	15	15	0	0

9. Overall Execution Summary

Total Test Cases Executed: 56

Passed: 53

Failed: 2

Partially Correct: 1

Pass Percentage:

94.64%

10. Defect Summary

BUG_001 – Email Validation Inconsistency

Module: Signup Email Validation

Severity: High

Priority: High

Status: Open

Description:

Email validation rules are inconsistent across signup steps.

Example:

An email accepted during Step 1 is rejected in Step 2.

Example Email:

dfgt2132#\$%@gygfh.12344

Expected Result:

The same validation rules should apply consistently across all signup steps.

Actual Result:

Email is accepted in Signup Step 1 but rejected in Signup Step 2.

Screenshot Proof:

BUG_002 – Confirm Password Copy-Paste Validation Bug

Module: Signup Details Validation

Severity: High

Priority: High

Status: Open

Description:

When a valid password is entered and the same password is copy-pasted into Confirm Password, the system sometimes incorrectly shows a mismatch error.

Expected Result:

Matching passwords should be accepted even when copy-pasted.

Actual Result:

System sometimes incorrectly shows password mismatch and blocks terms and policy checkbox and hence we can't proceed with the signup as checkbox trick is mandatory to proceed with next step.

Screenshot Proof:

11. Key Observations

- Most field validations are functioning correctly.
 - Required field validations are implemented properly.
 - Signup and Login flows work as expected.
 - Forgot Password flow works properly with auto-filled email.
 - Reset Password functionality works correctly.
 - Two validation-related defects were identified.
-

12. Recommendations

The following improvements are recommended:

- Fix email validation inconsistency across signup steps.
 - Fix confirm password copy-paste validation bug.
 - Improve validation consistency across all authentication modules.
 - Add better validation messages for improved user experience.
-

13. Conclusion

The Authentication Module of the Tichi Web Application was tested successfully using manual testing techniques. Most functionalities are working correctly, and major user flows such as Signup, Login, Forgot Password, and Reset Password are operational.

A total of 56 test cases were executed with a pass percentage of 94.64%.

Two defects were identified related to validation consistency and password confirmation behavior. These issues should be addressed to improve reliability before production release.

Overall, the application demonstrates good functional stability with minor validation issues requiring resolution.
